

Captive carrier TransTRAX Measurement Forms

Overview

The enclosed forms are meant to give us the information needed to design a Captive Carrier TransTRAX to fit a particular site. In order for us to make the equipment to best fit the site and minimize installation problems, all the information blocks will need to be filled in. We recommend taking pictures of the site and returning them with the form. Take photos of the overall site layout both inside, and outside, and of any details like ceiling penetrations and curbs. Be sure to include pictures of the inside of the canopy and above the inside ceiling. If you have questions about the form, or possible routing or installation issues, give us a call while still on site, (513-677-0500, available 8 am until 4 pm Eastern time).

Using the forms

The form is made so that the dimensions, and any additional information you would like to add, can be typed directly onto the form. Each data blank will hold pages of typed information, even though it will only show a portion of it. If you do not have a portable device to take to the site so you can enter the information directly, print out 1 or more copies of each layout plan to write the dimensions and notes onto. When you return to your computer later, you can enter the information onto the form.

Once on site, choose the layout plan that best fits that site, in the window to the left, right click on the file name for that layout and click “Open” in the pop-up window. Then go to “File”, “Save As”, and save the file, typically as the site name.

After saving, enter the information and any notes, then save the completed form.

Returning the form

Return the form to us by attaching it, and any associated photos to an email and send to: cad@bavis.com
